| Ford | Mazda | Volkswagon |
| GMC | Mercedes-Benz | Volvo |

Today's automotive shopper is 5x more likely to submit their information on a specific piece of inventory versus a generic price quote form. Provide your site traffic an attractive and easy to use tool that allows them to search over one million in stock vehicle listings in minutes by simply inserting a few lines of code onto your webpage.

These listings are easily searchable using criteria such as mileage, price, type,

and year. Once the consumer submits a basic search query, they are then able to refine their search using filters such as color, fuel type, and number of doors, among others.

Every listing is payable, meaning that there is a buyer behind each vehicle - no fillers! In addition, duplicate vehicles are eliminated and VINs are verified to ensure accuracy of your site's content. The inventory is also updated each day to remove sold

vehicles and add any new listings.

With over 90% of used car shoppers using independent automotive sites to find their next vehicle, this tool is invaluable to your in market site traffic along with your revenue stream.
